Competences

- Project and Program Management within Operations and R&D
- Create overview and transparency in complex projects
- Broad business understanding to ensure that good business decisions are made in projects
- Project implementation in Operations
- Solid knowledge of implementation and maintenance of ERP systems
- Leadership – it's all about the people

Key results

Successful project management of multiple projects across operations and R&D as an external consultant, ensuring compliance, cost savings and bringing new/updated products to market on time and on cost.
Pretotyping and prototyping of new medical device within own medtech company.
Leadership roles in multiple branches ensuring highly motivated and productive team members.

Personal Characteristics

David is an experienced leader and project/program manager who enjoys the challenges of complex projects. He is comfortable working with all levels in an organization and he uses his broad business background and understanding to find solutions together with the team.

David understands both the quality and regulatory requirements in a medical device company and works well within these requirements.
